Assignment 0205 Feedback

Britain Southwick

1a — You show some command line proficiency but shied away from taking full advantage of it, with regard to specifying precise commands and minimizing manual eyeballing by you to get precisely to the desired information only. (**|**)

1b — You largely worked with processes and memory usage well, except for needing some human eyeballing to get to the required information. Plus you seem to not have caught that your output seemed to contain some inconsistent results. Not your fault that this appears weird, but I think you should have at least noticed it. (**|**)

1c — Your file activities look good, except for the way you did `du`. I don't think you double-checked if `sort` was working the way you thought it did. (**|**)

1d — You showed good proficiency with managing I/O across the board, although you could have done more of it in order to save you some eyeballing. For the `screen` exercise, I think you could have documented your activities more thoroughly. (**|**)

1e — You have shown that you have no problems interacting with computers across a network. (**+**)

4d — You generally did a good job with looking up necessary information. As mentioned, the main knock is that you missed some opportunities to fully make the command line work for you. (**|**)

4e — You phased your work very well, with good commit messages. (**+**)

4f — Submitted on time. (**+**)
